

CLIMATE ANALYSIS REPORT

Nile Delta • 30.8°N, 31.0°E

Model	WeatherNext2 (Local Monte Carlo Fallback)
Ensemble Size	10
Generated	2026-09-23 08:05:48 UTC+03:00

EXECUTIVE CLIMATE SNAPSHOT

Indicator	Value	Signal
Temperature anomaly	+0.79 °C	Above baseline
Precipitation anomaly	-5.8%	Below baseline
Growing season shift	+2 days	Shift detected
Heat stress risk	Moderate	Monitor
Drought risk	Low	No drought conditions

Interpretation: The forecast indicates warmer-than-baseline conditions across the forecast horizon alongside reduced precipitation. Agronomic indicators point to higher irrigation demand and evapotranspiration, while the reported extreme-event checks show no detected heat stress, drought, flood, or frost event.

1. PREDICTIVE MODELS

Multi-Horizon Forecast

Horizon	Temperature (°C)	Precipitation (mm)	Confidence
6h	26.0 ± 0.3	360 ± 22	96%
24h	26.1 ± 0.3	347 ± 25	96%
48h	26.1 ± 0.5	348 ± 24	96%
72h	25.8 ± 0.3	336 ± 21	96%
120h	26.4 ± 0.4	360 ± 15	97%
168h	26.2 ± 0.4	353 ± 19	97%

Seasonal Outlook

Metric	Assessment
Temperature Anomaly	+0.79 °C
Precipitation Anomaly	-5.8%
Growing Season Shift	+2 days
Heat Stress Risk	Moderate
Drought Risk	Low

2. CLIMATE DELTAS

Temperature Δ (Forecast – Baseline)

Horizon	ΔT (°C)	Direction
6h	+0.64	↑ Increase
24h	+0.68	↑ Increase
48h	+0.66	↑ Increase
72h	+0.41	↑ Increase
120h	+1.00	↑ Increase
168h	+0.79	↑ Increase

Precipitation Δ

Horizon	ΔP	Absolute change
6h	-3.9%	-15 mm
24h	-7.5%	-28 mm
48h	-7.1%	-27 mm
72h	-10.4%	-39 mm
120h	-4.0%	-15 mm
168h	-5.8%	-22 mm

Agronomic Shifts

Metric	Change / Direction
Growing Degree Days	+24 GDD/month
Evapotranspiration	+3.6%
Irrigation Demand	+5.8%
Heatwave Days	+6 days
Frost Risk Direction	Decreasing
Crop Suitability	Minor adjustment; monitor

3. EXTREME EVENTS

Hazard / Metric	Reported assessment
Heat Stress & Heatwave	Max forecast: 26.4 °C • Probability: 0% • 32 current → 40 projected heatwave days • No heat stress events detected
Drought (SPI)	No drought conditions (SPI > -1.0)
Heavy Precipitation / Flood	No flood risk detected
Frost / Cold Snap	No frost risk detected

4. KEY OPERATIONAL INDICATORS

Indicator	Reported value	Planning relevance
Peak forecast temperature	26.4 °C	Thermal monitoring
Heatwave probability	0%	No event signal in forecast
Precipitation anomaly	-5.8%	Water availability monitoring
Irrigation demand Δ	+5.8%	Irrigation planning
ET Δ	+3.6%	Water-balance monitoring
GDD Δ	+24 GDD/month	Crop development tracking

Indicator	Reported value	Planning relevance
Growing season shift	+2 days	Seasonal planning

5. REPORT METADATA & INTERPRETATION NOTES

- Source report: EOAgriTool Climate Analysis Report for the Nile Delta (30.8°N, 31.0°E).
- Forecast model: WeatherNext2 using the stated Local Monte Carlo Fallback configuration.
- Ensemble size: 10 members.
- The report values are reproduced from the supplied report specification. The uploaded dashboard image was used as a visual reference for the climate-report presentation style.
- Risk statements are presented as reported outputs of the supplied analysis and are not independent validation of the underlying forecast model.
